In the Claims

This listing of claims will replace all prior versions and listings of claims in the application:

- 1 1. (Original) A method of transcoding image data in a 2 compressed format comprising the steps of:
- decoding differential pulse code modulation DC frequency components of plural image blocks;
- 5 partitioning the image into a plurality of image cells, each 6 image cell including a plurality of image blocks;
- recoding DC frequency components of plural image blocks in 8 differential pulse code modulated format, said differential pulse 9 code modulated of said image blocks contained solely within a
- 10 corresponding image cell;
- extracting the Huffman tables from the image data;
- 12 storing said extracted Huffman tables together with an
- 13 indication of an associated image cell in a header for said image
- 14 cell;
- identifying image blocks by a block count; and
- 16 recoding said identified image blocks into corresponding image
- 17 cells.
- 1 2. (Original) The method of transcoding of claim 1, wherein:
- 2 said step of extracting Huffman tables includes
- 3 detecting any new Huffman tables within said image block,
- 4 and
- 5 storing said detected Huffman table with a define Huffman
- 6 table marker in said corresponding image cell.
- 3. (Original) The method of transcoding of claim 1, wherein:
- said step of identifying image blocks by a block count
- 3 includes

JUN-15-2005 10:06 FPCD6133 972 917 4418 P.05

4 detect	ing end	of	block	identifiers	in	said	image	data
----------	---------	----	-------	-------------	----	------	-------	------

- 5 and
- 6 assigning sequential numbers to identified image blocks.
- 1 4. (Original) The transcoding method of claim 1, further 2 comprising the step of:
- 3 storing a starting address of each recoded image cell.
- 5. (Original) The transcoding method of claim 1, further comprising the steps of:
- 3 performing an image transformation from a source image in said 4 transcoded format to a destination image including
- 5 identifying a next source pixel in the image 6 transformation,
- 7 determining if said next source pixel is in a new image 8 cell,
- 9 if said next source pixel is not in a new image cell, 10 then performing said image transformation, and
- if said next source pixel is in a new image cell, then
 decompressing said new image cell and preforming said image
 transformation,
- until said image transformation is performed on a last source pixel.
- 1 6. (Original) The transcoding method of claim 1, further 2 comprising the steps of:
- performing an image transformation from a source image in said transcoded format to a destination image including
- identifying a next source pixel in the image transformation,
- determining if said next source pixel is in a new image cell,

JUN-15-2005 10:07 FPCD6133 972 917 4418 P.06

if said next source pixel is not in a new image cell, 9 then performing said image transformation, and 10 11 if said next source pixel is in a new image cell, then decompressing said new image cell and performing said image 12 transformation if memory is available to store said 13 14 decompressed new image cell, else discarding a prior decompressed image cell, then decompressing said new image 15 cell and performing said image transformation, and 16 17 until said image transformation is performed on a last source 18 pixel.
